Vinyl Plotter

The Saga uses *Easy Cut Studio* software which is installed on the marked large screen computer next to it.
It is simplest to design your cut in *Studio* using the extensive library of shapes & fonts.
If you have a particular SVG file you want to use it can be imported into your project.

Saga 1350I(I)P Vinyl Cutter

No registration mark system (ARMS) included

Anyone know how to determine if the motor is a servo (150W - DC) or stepper motor (70W)?

I suppose we can check how high the speed settings will go: servo @ 960 and stepper @ 600

I'm leaning towards a stepper motor (1350IIP) since there's no power brick.
